

MANENIMABASI UDOH

Senior Backend Engineer | Go, TypeScript, Distributed Systems

manenimabasiudoh@gmail.com | [LinkedIn](#) | [GitHub](#) | [Credly](#)

PROFESSIONAL SUMMARY

Senior Backend Engineer and hands-on technical lead building Go and TypeScript services for payments, wallets, and distributed workflows. Combines financial correctness, event-driven architecture, and cross-service delivery with code review and mentoring. CKA and AWS Certified Solutions Architect with backend ownership across healthcare, commerce, and enterprise ERP systems.

CORE SKILLS

Languages and Frameworks: Go, TypeScript, Node.js, NestJS, Python/FastAPI

Backend and Data: PostgreSQL, MongoDB, Redis, gRPC, REST APIs

Messaging and Workflows: Kafka, BullMQ, transactional outbox/inbox, Debezium, Kafka Connect

Cloud and Delivery: AWS, Kubernetes, Docker, Terraform, GitHub Actions

Correctness and Security: concurrency control, idempotency, immutable ledgers, authentication, RBAC

PROFESSIONAL EXPERIENCE

Infostrategy Technology

Backend Engineer: Mar 2025 - Aug 2025 | Lead Backend Engineer: Aug 2025 - Present

- Created Go payment and wallet services with PostgreSQL persistence and gRPC APIs, owning provider integration and financial workflows across independently deployed services.
- Designed wallet balance mutation with exact decimal arithmetic, row-level locking, atomic ledger insertion, and unique transaction references to preserve correctness under concurrent requests and retries.
- Implemented a Payment transactional outbox and Wallet inbox/receipt transactions, with versioned Kafka events and replay-safe consumers; verified PostgreSQL-to-Debezium-to-Kafka CDC in a live local smoke test.
- Built healthcare and commerce workflows spanning payment-aware reminders, multichannel notifications, HMO subscriptions, and multi-distributor checkout; evolved ERP approvals and asynchronous operational workflows.
- Led hands-on backend delivery through architecture guidance, cross-service contract coordination, and PR reviews; mentored engineers and interns while standardizing engineering progress reporting.

SalTech

Backend Software Development Engineer | Jun 2024 - May 2025

- Built and evolved NestJS and MongoDB backend services for product workflows, collaborating remotely through Git and pull-request delivery.
- Developed real-time messaging functionality and backend ticket workflows supporting interactive product features.
- Integrated Typesense search and indexing for event data, investigating consistency issues across application persistence and search results.
- Implemented location and nearby-discovery workflows, connecting geographic product behavior to backend queries and service interfaces.
- Integrated Stripe PaymentIntent flows and debugged payment behavior across backend processing and web checkout interactions.

Escroid / 6ixth Ideas

Backend Developer, Contract | Mar 2023 - Sep 2023

- Built Node.js serverless APIs with AWS Lambda and API Gateway, using DynamoDB persistence and Serverless Framework deployment patterns.
- Integrated Zoho with backend workflows, connecting external platform behavior to application services.
- Documented service interfaces with Swagger/OpenAPI so consumers could understand and integrate backend endpoints.
- Implemented Jest testing and GitHub Actions CI/CD to support repeatable verification and delivery of backend changes.

ADDITIONAL ENGINEERING EXPERIENCE

Talosmart | Software Engineer | Sep 2023 - Dec 2023

Delivered product features, integrated REST APIs and resolved application/service integration defects through Git, code review and deployment previews.

ALX-T / Udacity | Cloud Developer | Jul 2022 - Oct 2022

Completed the Cloud Developer programme with hands-on AWS/serverless development, Go project work, and Docker-based delivery.

HNG 7.0 | Software Engineering Participant | May 2020 - Jun 2020

Accepted into HNG 7.0 and completed an early engineering task that was merged.

Freelance & Independent Projects | Software Developer | Aug 2017 - Jun 2022

Built web applications with JavaScript, React, and Firebase; delivered authentication and API-driven features through requirements, debugging, and client revisions.

SELECTED PROJECTS

Distributed Task Orchestrator | [View project](#)

Go, gRPC, PostgreSQL, Redis

- Built a task orchestration system with gRPC streaming and client/worker interfaces for distributed execution.
- Implemented explicit task states with timeouts, cancellation, and exponential retries to make execution and failure behavior visible.
- Added worker-disconnection requeue behavior and persistence components, with API documentation and operational runbook material.

Distributed Rate Limiter | [View project](#)

Go, Redis, Lua

- Built distributed token-bucket rate limiting with atomic Redis/Lua refill and deduction operations.
- Implemented Redis and in-memory backends, exposing token-bucket decisions through a shared limiter interface for application integration.
- Added pluggable metrics, tests, and a Docker example to support integration and verification of rate-limiting policies.

Multi-Tenant SaaS Backend | [View project](#)

TypeScript, NestJS, PostgreSQL, Redis, BullMQ

- Built schema-per-tenant persistence with tenant-aware request context, making tenant selection explicit across application processing and database access.
- Implemented authentication and role-based access control alongside billing workflows, providing a foundation for subscription-backed SaaS functionality.
- Added asynchronous processing and supporting audit and notification modules, with Docker setup, documentation, and tests for local verification.

AI-Powered PR Review Agent | [View project](#)

Python, FastAPI, PostgreSQL, Redis, LangChain

- Built GitHub webhook ingestion with HMAC validation, diff parsing, and background jobs to separate request handling from model-driven review processing.
- Integrated Gemini through LangChain and validated structured findings against a schema before posting inline review comments on GitHub pull requests.
- Persisted review history in PostgreSQL and added tests, connecting model output to an inspectable engineering workflow rather than an isolated chat interface.

CERTIFICATIONS

Certified Kubernetes Administrator (CKA), The Linux Foundation | Jan 2026 - Jan 2028 | [View badge](#)

AWS Certified Solutions Architect - Associate, Amazon Web Services | May 2025 - May 2028 | [View badge](#)

EDUCATION

National Open University of Nigeria | PGD Information Technology | Apr 2024 - Jun 2026
